/note="Site_1: SalI; Site_2: BamHI; cDNA library was prepared and sequenced in Mouse Genome Encyclopedia Project of Genome Exploration Research Group in Riken Genomic Sciences Center and Genome Science Laboratory in RIKEN. Division of Experimental Animal Research in Riken contributed to prepare mouse tissues. 1st strand cDNA was primed with a primer [5' GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTVN 3'], cDNA was prepared by using trehalose thermo-activated reverse transcriptase and subsequently enriched for full-length by cap-trapper. cDNA went through one round of normalization to Rot = 10.0 and subtraction to Rot = 459.0. Second strand cDNA was prepared with the primer adapter of sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCCC 3']. cDNA was cleaved with XhoI and BamHI. Vector: a modified pBluescript KS(+) after bulk excision from Lambda FLC I. "

                  /clone_lib="Mouse 10kb plasmid UUGC1M library"
                  /note="Vector: PWD42nv; Purified genomic DNA from M.
                  musculus C57BL/6J (male) was obtained  from the Jackson
                  Laboratory Mouse DNA Resource
                  (http://www.jax.org/resources/documents/dnares/). The DNA
                  was hydrodynamically sheared by repeated passage through a
                  0.005 inch orifice at constant velocity. The sheared DNA
                  was blunt end-repaired with T4 DNA polymerase and T4
                  polynucleotide kinase. Adaptor oligonucleotides were
                  ligated to the blunt ends in high  molar excess. The
                  adaptored DNA was purified and size-selected for a 9.5 to
                  10.5 kb range using preparative agarose gel
                  electrophoresis. Vector DNA was prepared from a derivative
                  of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                  inducible derivative of plasmid R1. The vector was ligated
                  with adaptors complementary to the insert adaptors and
                  purified. The sheared, adaptored mouse DNA was annealed to
                  adaptored vector DNA, and transformed into
                  chemically-competent E. coli XL10-Gold (Stratagene) cells
                  and selected for ampicillin resistance."

            1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
            end enriched, double-strand cDNA was digested with Not I and cloned
            into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
            was not normalized. Library was constructed by Life Technologies, a
            division of Invitrogen.
            This sequence belongs to sequence cluster 4332.f
            For more information about this cluster, see

:MENT     1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime
          end enriched, double-strand cDNA was digested with Not I and cloned
          into the Not I and EcoR V sites of the pCMVSPORT 6 vector. Library
          was normalized. Library was constructed by Life Technologies, a
          division of Invitrogen.

NUMBER OF SEQ ID NOS: 13
SOFTWARE: PatentIn Ver. 2.1
EQ ID NO 2
  LENGTH: 1645
  TYPE: DNA
  ORGANISM: Artificial Sequence
  FEATURE:
  NAME/KEY: gene
  LOCATION: (1)..(1645)
  OTHER INFORMATION: Interleukin-12 (IL-12, p35-subunit); Oligo DNA
  OTHER INFORMATION: Dumbbell
  FEATURE:
  NAME/KEY: misc_binding
  LOCATION: (1)..(2)
  OTHER INFORMATION: intramolecular binding site; the T-nucleotides at
  OTHER INFORMATION: position 1 to 2  can be modified with amino or caroxy
  OTHER INFORMATION: features
  FEATURE:
  NAME/KEY: misc_binding
  LOCATION: (1644)..(1645)
  OTHER INFORMATION: intramolecular binding site; the T-nucleotides at position 1644
  OTHER INFORMATION: to 1645  can be modified with amino or caroxy features
  FEATURE:
  OTHER INFORMATION: Description of Artificial Sequence:  Strandness: both;  nucleic
  OTHER INFORMATION: acid (linear),  hypothetical: No. 6451593 anti-sense: No

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Example 3; Page 56; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

PT Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
PT chain and canine IL-12 single chain proteins, useful for treating and
PT preventing autoimmune diseases, inflammatory diseases and/or graft
PT rejection in animals.
XX
PS Claim 1; Page 54-55; 106pp; English.
XX
CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

Novel feline cytokine protein - useful for treating feline auto:immune diseases, e.g. those caused by feline herpes virus or feline calcivirus.

Claim 24; Page 67; 94pp; Japanese.

This sequence encodes a fragment of a novel feline cytokine protein, FLAFp35. This protein can be used in the production of a FLAFp35/FLAFp40 heterodimer which can potentiate the cytotoxic activity of feline cytotoxic T lymphocyte cells. Such proteins are used for treatment of feline autoimmune diseases e.g. as caused by feline herpes virus or feline calcivirus

XX
PT   Novel feline cytokine protein - useful for treating feline auto:immune
PT   diseases, e.g. those caused by feline herpes virus or feline calcivirus.
XX
PS   Claim 22; Page 57-58; 94pp; Japanese.
XX
CC   This sequence encodes a novel feline cytokine protein, FLAFp35. This
CC   protein can be used in the production of a FLAFp35/FLAFp40 heterodimer
CC   which can potentiate the cytotoxic activity of feline cytotoxic T
CC   lymphocyte cells. Such proteins are used for treatment of feline
CC   autoimmune diseases e.g. as caused by feline herpes virus or feline
CC   calcivirus

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Claim 23; SEQ ID NO 35; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline single chain mature IL-12p35 subunit protein encoding cDNA.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 6; Page 66-67; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 6; Page 58-60; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a feline interleukin 12 DNA sequence, as described in the invention

   New nucleic acid molecule comprising a sequence encoding a feline p35 or
   p40 subunit protein and a nucleic acid linker, useful in preparing a
   vaccine against infectious diseases in feline animals.

   Example 3; SEQ ID NO 40; 103pp; English.

   The present invention relates to the feline interleukin (IL)-12p35 or p40
   subunit protein and their encoding nucleic acid molecules and a nucleic
   acid linker. The invention also provides the feline caspase (casp)-1,
   feline IL-18 single chain and canine IL-12 single chain proteins and
   their nucleic acid molecules. The nucleic acid molecule is useful in
   preparing a vaccine against infectious diseases in feline animals. The
   present sequence is the feline single chain IL-12 complementary DNA.

CC The present invention discloses new feline interleukin 18 (IL-18), feline
CC caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC proteins. A composition comprising a feline IL-18, feline caspase-1,
CC feline IL-12 single chain or canine IL-12 single chain proteins, a
CC nucleic acid encoding these proteins, mimetopes of these proteins,
CC multimeric forms of these proteins, an antibody against these proteins,
CC or an inhibitor identified by its ability to inhibit the activity of
CC these proteins, can be used to treat or prevent autoimmune diseases,
CC allergic reactions, infectious diseases, tumour development, inflammatory
CC diseases and/or graft rejection in animals. The present nucleic acid
CC sequence represents a feline interleukin 12 DNA sequence, as described in
CC the invention

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Claim 23; SEQ ID NO 101; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the feline N-terminal single chain IL-12p35 subunit protein encoding cDNA.

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Disclosure; Fig 2; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

Vaccine for treating or preventing lentivirus infection in cats, contains nucleic acid sequence encoding viral protein under control of eukaryotic promoter.

Claim 14; Page 37; 37pp; German.

This invention describes a novel vaccine (A) for prevention or treatment of lentivirus infection in felines which comprises an immunizing nucleic acid sequence (I) that contains, or comprises, at least part of a gene encoding a protein (II) of the virus, under control of a eukaryotic promoter functional in the relevant animal. (II) is especially the envelope (env) protein. The invention also describes (1) vaccine (A) containing an immunizing protein, or fragment, from a lentivirus plus at least one of interleukin (IL)-12 and/or -16; and (2) preparation of a lentivirus protein, or fragment, especially derived from feline immune deficiency virus (FIV), by expressing the corresponding nucleic acid sequence in a host cell. The products of the invention have antiviral activity. The vaccine (A) and related protein-based vaccines, are particularly used to treat or prevent lentivirus infections in domestic cats, especially feline immune deficiency virus (FIV). Vaccination with (A) allows differentiation between vaccinated and infected animals, from the antibody status. The vaccines may be formulated with an adjuvant (particularly interleukin-12 and/or IL-16) that elicits a cytotoxic immune response, particularly a Th1 response

retinopathy and cancer.

Claim 87; Page 140; 223pp; English.

The invention relates to nucleic acids encoding modified cytokine polypeptides (i.e. modified p40 and p35 polypeptides). The modified cytokine polypeptides have T-cell proliferative and interferon (IFN)-gamma induction activities. The polypeptides and polynucleotides of the invention are useful for treating various diseases e.g. bacterial infections, AIDS, diabetic retinopathy and cancer. The polypeptide and polynucleotide may also be useful as a vaccine adjuvant, to enhance a vaccinated host's cell-mediated immunity for protective response to a pathogen. The present sequence is a modified human p35 protein encoding DNA

Recombinant feline interleukin-12, useful as immunostimulant and for treating e.g. viral infections in cats, and related nucleic acid constructs.

Disclosure; Fig 2; 35pp; German.

This invention describes a novel feline interleukin-12 (fIL-12) polypeptide (I) that is expressed, by recombinant gene expression in eukaryotic or prokaryotic cells, in the form of both polypeptide chains of subunits p35 and p40. These proteins are formed so that, in equimolar concentrations and in presence of an immunizing antigen, they can be administered to carnivores, particularly domestic cats. The invention also describes a nucleic acid construct (II) encoding fIL-12 containing sequences at least 95% identical with the p40- and p35-encoding sequences (A, 990 bp and B, 669 bp respectively), reproduced in the specification, as immunostimulants for immunization against infectious diseases and/or for treating infections or tumors in felines, especially domestic cats. The products of the invention have immunostimulatory, antiviral and antitumor activity. Nucleic acid constructs that encode (II) are useful as adjuvants for prophylactic immunization against viral diseases and for treating diseases associated with a Th1 defect. IL-12 induces synthesis of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

New nucleic acid molecule comprising a sequence encoding a feline p35 or p40 subunit protein and a nucleic acid linker, useful in preparing a vaccine against infectious diseases in feline animals.

Example 4; SEQ ID NO 49; 103pp; English.

The present invention relates to the feline interleukin (IL)-12p35 or p40 subunit protein and their encoding nucleic acid molecules and a nucleic acid linker. The invention also provides the feline caspase (casp)-1, feline IL-18 single chain and canine IL-12 single chain proteins and their nucleic acid molecules. The nucleic acid molecule is useful in preparing a vaccine against infectious diseases in feline animals. The present sequence is the canine single chain IL-12p35 subunit protein encoding cDNA.

PS Example 4; SEQ ID NO 51; 103pp; English.
XX
CC The present invention relates to the feline interleukin (IL)-12p35 or p40
CC subunit protein and their encoding nucleic acid molecules and a nucleic
CC acid linker. The invention also provides the feline caspase (casp)-1,
CC feline IL-18 single chain and canine IL-12 single chain proteins and
CC their nucleic acid molecules. The nucleic acid molecule is useful in
CC preparing a vaccine against infectious diseases in feline animals. The
CC present sequence is the canine single chain IL-12p35 subunit
CC complementary DNA.

Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins, useful for treating and preventing autoimmune diseases, inflammatory diseases and/or graft rejection in animals.

Claim 1; Page 67-68; 106pp; English.

The present invention discloses new feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single chain and canine IL-12 single chain proteins. A composition comprising a feline IL-18, feline caspase-1, feline IL-12 single chain or canine IL-12 single chain proteins, a nucleic acid encoding these proteins, mimetopes of these proteins, multimeric forms of these proteins, an antibody against these proteins, or an inhibitor identified by its ability to inhibit the activity of these proteins, can be used to treat or prevent autoimmune diseases, allergic reactions, infectious diseases, tumour development, inflammatory diseases and/or graft rejection in animals. The present nucleic acid sequence represents a canine interleukin 12 DNA sequence, as described in the invention

New therapeutic and prophylactic agents - comprise genetically-engineered canine interleukin 12, used to treat, e.g. canine and feline immunological diseases.

Claim 1; Page 33-34; 45pp; Japanese.

The present sequence encodes a canine interleukin 12 (IL-12) protein. The IL-12 protein can be used in therapeutic or prophylactic agents. The agents can be used to prevent and treat canine and feline immunological diseases including dog and cat tumours, skin diseases, viral infections and allergic diseases, especially tumours, breast tumour, oesinophilic granuloma, epidermoid tumour, skin tumour, lipoma, othematoma, pneumonoedema, skin soft pedicled soft tumour and anal tumour; skin diseases, otitis externa, dermatitis, eczema, fungal diseases of the skin, pyoderma, allergic dermatitis, nettle rash, traumatic dermatitis and hair loss; infections; dog Parvovirus infection and distemper virus, cat plaque virus infection and feline leukaemia, and allergic diseases, e.g. pollinosis

   Large scale production of interleukin-12 for pharmaceutical applications,
   comprises infecting an insect cell with a recombinant virus containing
   gene encoding IL-12, and producing IL-12 by carrying out spinner culture
   of insect cell.

   Example; SEQ ID NO 6; 8pp; Japanese.

   The invention related to the large scale production of interleukin-12 (IL
   -12), which involves infecting an insect cell with a recombinant virus
   containing a gene encoding IL-12, and producing IL-12 by carrying out
   spinner culture of insect cell. The method is useful for producing IL-12,
   preferably canine IL-12. IL-12 has pharmaceutical applications. The
   present sequence encodes canine IL-12 P35, which is used in the
   exemplification of the present invention.

PT   Canine cytokine protein which activates canine cytotoxic T lymphocytes -
PT   is useful for treatment of viral and autoimmune diseases in dogs.
XX
PS   Claim 8; Page 33-34; 51pp; Japanese.
XX
CC   This sequence encodes the canine lymphocyte activation factor (CLAF) of
CC   the invention. CLAF activates lymphocytes, especially canine cytotoxic T
CC   cells. The protein contains a p35 and a p40 subunit. CLAF or antibodies
CC   recognising it may be used in the treatment of viral diseases in dogs
CC   (such as canine distemper, canine parvovirus and canine infectious
CC   hepatitis). The antibodies may also be used in isolation of CLAF from
CC   culture of the transformant host cells by affinity chromatography. The
CC   p40 homodimer can be used for the treatment of autoimmune diseases in
CC   dogs

   Feline interleukin 18 (IL-18), feline caspase-1, feline IL-12 single
   chain and canine IL-12 single chain proteins, useful for treating and
   preventing autoimmune diseases, inflammatory diseases and/or graft
   rejection in animals.

   Example 4; Page 94-95; 106pp; English.

   The present invention discloses new feline interleukin 18 (IL-18), feline
   caspase-1, feline IL-12 single chain and canine IL-12 single chain
   proteins. A composition comprising a feline IL-18, feline caspase-1,
   feline IL-12 single chain or canine IL-12 single chain proteins, a
   nucleic acid encoding these proteins, mimetopes of these proteins,
   multimeric forms of these proteins, an antibody against these proteins,
   or an inhibitor identified by its ability to inhibit the activity of
   these proteins, can be used to treat or prevent autoimmune diseases,
   allergic reactions, infectious diseases, tumour development, inflammatory
   diseases and/or graft rejection in animals. The present nucleic acid
   sequence represents a canine interleukin 12 DNA sequence, as described in
   the invention

   New nucleic acid molecule comprising a sequence encoding a feline p35 or
   p40 subunit protein and a nucleic acid linker, useful in preparing a
   vaccine against infectious diseases in feline animals.

   Example 4; SEQ ID NO 106; 103pp; English.

   The present invention relates to the feline interleukin (IL)-12p35 or p40
   subunit protein and their encoding nucleic acid molecules and a nucleic
   acid linker. The invention also provides the feline caspase (casp)-1,
   feline IL-18 single chain and canine IL-12 single chain proteins and
   their nucleic acid molecules. The nucleic acid molecule is useful in
   preparing a vaccine against infectious diseases in feline animals. The
   present sequence is the canine single chain IL-12p35 subunit
   complementary DNA.

XX
CC   The present invention discloses new feline interleukin 18 (IL-18), feline
CC   caspase-1, feline IL-12 single chain and canine IL-12 single chain
CC   proteins. A composition comprising a feline IL-18, feline caspase-1,
CC   feline IL-12 single chain or canine IL-12 single chain proteins, a
CC   nucleic acid encoding these proteins, mimetopes of these proteins,
CC   multimeric forms of these proteins, an antibody against these proteins,
CC   or an inhibitor identified by its ability to inhibit the activity of
CC   these proteins, can be used to treat or prevent autoimmune diseases,
CC   allergic reactions, infectious diseases, tumour development, inflammatory
CC   diseases and/or graft rejection in animals. The present nucleic acid
CC   sequence represents a canine interleukin 12 DNA sequence, as described in
CC   the invention

Novel gene vector for expression in insect useful for expression of foreign gene such as dog interleukin 12 gene, comprises two promoters.

Claim 4; SEQ ID NO 8; 13pp; Japanese.

The invention relates to a novel gene vector for expression in an insect comprising at least two promoters, particularly the polyhedrin promoter and p10 promoter. The vector contains at least two types of foreign protein expression gene and the gene product of the vector is produced using a gene recombinant baculovirus, particularly a recombinant silkworm nuclear polyhedrosis virus. The baculovirus is proliferated in a silkworm. The vector of the invention may be useful for expression of a foreign gene, such as canine interleukin 12. Within the vector, two types of foreign protein expression genes are integrated simultaneously for their simultaneous expression. The current sequence is that of the canine interleukin-12 (IL-12) p35 DNA of the invention.

Nucleic acid encoding ovine interleukin-5 or -12 - used as vaccine adjuvants and to treat or prevent microbial infections in livestock.

Claim 8; Page 43-44; 78pp; English.

The sequences given in AAT50757-59 encode ovine interleukin-12 (IL-12) 35

CC kD subunit (partial and full length sequence) and the 40 kD subunit.
CC Ovine IL-5 or IL-12 are used to treat and/or prevent infections in
CC livestock (esp. cows and sheep), particularly where the animals are
CC stressed, e.g. during transport. IL-5 and IL-12 can also be used as
CC adjuvants in vaccines for veterinary use (partic. weakly immunogenic
CC subunit or synthetic peptide vaccines). They may also be used to treat
CC cancer, immunosuppression and allergy, to enhance/suppress the
CC reproductive system and to promote growth or early maturity. Optionally
CC interleukin can be delivered from constructs or delivery cells and
CC antibodies are useful in enzyme immunoassays for rapid diagnosis of
CC infection. The interleukins are immunopotentiators, especially IL-5
CC promotes growth of early haematopoietic progenitor cells and generation
CC of cytotoxic cells from thymocytes, also it stimulates production and
CC secretion of IgM and IgA (in synergism with bacterial endotoxin). IL-12
CC induces production of gamma-interferon by, and proliferation of, T and NK
CC cells and increases the (non-)specific cytolytic lymphocyte response. The
CC genetic constructs can also be used for in vitro production of IL-5 or -
CC 12. (Updated on 17-OCT-2003 to standardise OS field)

Preparation of bovine interleukin 12 comprising using a vector containing the gene encoding it, useful for the prevention and treatment of chronic and opportunistic infections.

Example 1; Page 8-9; 11pp; Japanese.

The invention relates to a method for the preparation of bovine interleukin 12 (BoIL12). BoIL12 consists of a heterodimer of p35 and p40 subunits. BoIL12 is produced by introducing into a host cell, recombinant vectors containing genes encoding the p35 and p40 subunits. This sequence represents the coding region for the bovine IL12 p35 subunit. Interleukin 12 is used for the prevention and treatment of chronic infections and opportunistic infections

Nucleic acids encoding modified cytokine polypeptides (i.e. modified p40
and p35 polypeptides), useful for treating various diseases e.g. diabetic
retinopathy and cancer.

Claim 87; Page 140; 223pp; English.

The invention relates to nucleic acids encoding modified cytokine
polypeptides (i.e. modified p40 and p35 polypeptides). The modified
cytokine polypeptides have T-cell proliferative and interferon (IFN)-
gamma induction activities. The polypeptides and polynucleotides of the
invention are useful for treating various diseases e.g. bacterial
infections, AIDS, diabetic retinopathy and cancer. The polypeptide and
polynucleotide may also be useful as a vaccine adjuvant, to enhance a
vaccinated host's cell-mediated immunity for protective response to a
pathogen. The present sequence is a modified human p35 protein encoding
DNA

Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

Claim 7; SEQ ID NO 3488; 145pp; English.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This polynucleotide sequence represents a transcript-based context sequence which flanks an SNP found in a human myocardial infarction-associated gene of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.

Identifying an individual who has an altered risk for developing myocardial infarction by detecting a single nucleotide polymorphism in the individual's nucleic acids.

Claim 7; SEQ ID NO 3496; 145pp; English.

The invention relates to a novel method for identifying an individual who has an altered risk for developing myocardial infarction. The method comprises detecting a single nucleotide polymorphism (SNP) in any one of the nucleotide sequences given in the specification in the individual's nucleic acids, where the presence of the SNP is correlated with an altered risk for myocardial infarction in the individual. The invention further comprises: an isolated nucleic acid molecule comprising at least 8 contiguous nucleotides where one of the nucleotides is an SNP given in the specification or its complement and encoding any one of the amino acid sequences given in the specification; an isolated polypeptide comprising an amino acid sequence given in the specification; an antibody that specifically binds to the polypeptide or its antigen-binding fragment; an amplified polynucleotide containing an SNP given in the specification and which is between about 16 and 1000 nucleotides in length; a kit for detecting an SNP in a nucleic acid, comprising the polynucleotide, a buffer and an enzyme; a method of detecting an SNP in a nucleic acid molecule; a method of detecting a variant polypeptide; and a method for identifying an agent useful in treating or preventing myocardial infarction. The novel detection method has cardiant activity. The nucleic acids of the invention may be used in gene therapy. The method is useful in identifying an individual who has an increased or decreased risk for developing myocardial infarction and for preparing a composition for treating or preventing myocardial infarction. This polynucleotide sequence represents a transcript-based context sequence which flanks an SNP found in a human myocardial infarction-associated gene of the invention. Note: This sequence was not shown in the specification. The sequence has come from an electronic sequence listing downloaded from the WIPO website.

Novel protein comprising cytotoxic lymphocyte maturation factor in substantially pure form or protein which exhibits cytotoxic lymphocyte maturation factor activity, useful as antitumor and immunoenhancing agent.

Claim 20; Page 29; 74pp; English.

The invention relates to a protein which comprises a cytotoxic lymphocyte maturation factor (CLMF). The protein is useful for stimulating activated T-cells which involves treating T-cells with the protein. The method further involves treating the activated T-cells with IL2 or its biologically active fragment. The protein is useful for stimulating natural killer cells which involves treating the natural killer cells with the protein. The protein has immunoenhancing and antitumour effects when used as single therapeutic agent in vivo. The present sequence is used in the exemplification of the present invention.

XX
CC AAQ97484 and AAQ97485 are from human lymphoblast cell line RMPI 8866. IL-
CC 12 is a heterodimeric cytokine which was originally identified as a
CC factor which induces gamma-interferon from T cells and natural killer
CC cells as set forth in PCT/US91/06332, published April 2 1992, and
CC incorporated by reference. EP 433827, published June 26 1991, disclosed
CC IL-12 as a cytotoxin lymphocyte maturation factor. In the patent, IL-12
CC is defined as a heterodimeric glycoprotein comprised of two covalently
CC linked subunits having mol. wts of about 40 kD and 35 kD. The two
CC subunits may be disulfide-bonded. IL-12 is administered to prevent or
CC ameliorate GVHD. Dosage is 1 ng-0.1 mg (esp. 1.0 ng-1 microg)/kg daily
CC for 3 days, the first dose given 1 hr. after transplant. IL-12 can be
CC used as the native heterodimer or as subunits. (Updated on 25-MAR-2003 to
CC correct PN field.)

New plasmids containing an interferon-alpha coding sequence, used for the treatment of a mammalian condition or disease, particularly cancer.

Claim 11; Page 38-39; 137pp; English.

This sequence represents a semi-optimised coding region for the human interleukin 12 p35 subunit. The invention relates to a novel plasmid comprising a cytomegalovirus (CMV) promoter transcriptionally linked with an interferon alpha (IFN-alpha) coding sequence, and a growth hormone 3'-untranslated region (UTR). The plasmids can be used for treating a mammalian condition or disease, particularly cancer

New interleukin 12A (IL-12A) gene polymorphic variants, for studying the expression and function of IL-12A and screening candidate drugs for treating AIDS and cancer.

Claim 28; Fig 2; 72pp; English.

The invention comprises the amino acid and coding sequence of the human interleukin 12A (IL-12A) protein. Specifically the invention relates to the identification of polymorphisms within the human (IL-12A) gene sequence. The polymorphisms identified in the human IL-12A gene sequence are useful in studying the expression and function of IL-12A, and in screening drugs for the treatment of disorders such as AIDS, malaria, tuberculosis and cancer. The IL-12A polymorphisms may be used to haplotype and genotype the IL-12A gene of an individual. The IL-12A DNA sequences of the invention can be used to create transgenic animals for studying expression of the IL-12A isogenes in vivo. The present DNA sequence represents the coding sequence of the human interleukin 12A (IL-12A) gene

XX
CC The invention relates to a recombinant baculovirus comprising DNA
CC encoding human interleukin 12 (hIL-12) and methods for its preparation.
CC The recombinant baculovirus strain is designated Autographa california
CC nuclear polyhedrosis virus AcNPV-hIL12 (CCTCC No. 2 V200108). This strain
CC contains two human IL-12 subunit genes, the IL-12 P35 subunit gene
CC (ACC47589) and the IL-12 P40 subunit gene (ACC47592) which are
CC respectively under the control of the viral polyhedrin and P10 promoters.
CC The baculovirus can be used in the recombinant production of human IL-12
CC which is suitable for treating tumours and bacterial, viral and other
CC infections. The present sequence represents the human IL-12 P35 subunit
CC gene used in construction of the baculovirus vector of the invention

XX
PS   Disclosure; Fig 2; 35pp; German.
XX
CC   This invention describes a novel feline interleukin-12 (fIL-12)
CC   polypeptide (I) that is expressed, by recombinant gene expression in
CC   eukaryotic or prokaryotic cells, in the form of both polypeptide chains
CC   of subunits p35 and p40. These proteins are formed so that, in equimolar
CC   concentrations and in presence of an immunizing antigen, they can be
CC   administered to carnivores, particularly domestic cats. The invention
CC   also describes a nucleic acid construct (II) encoding fIL-12 containing
CC   sequences at least 95% identical with the p40- and p35-encoding sequences
CC   (A, 990 bp and B, 669 bp respectively), reproduced in the specification,
CC   as immunostimulants for immunization against infectious diseases and/or
CC   for treating infections or tumors in felines, especially domestic cats.
CC   The products of the invention have immunostimulatory, antiviral and
CC   antitumor activity. Nucleic acid constructs that encode (II) are useful
CC   as adjuvants for prophylactic immunization against viral diseases and for
CC   treating diseases associated with a Th1 defect. IL-12 induces synthesis
```

of interferon gamma (Th1 response). The feline interleukin-12 polypeptide is useful for carnivores, and particularly domestic cats in the following: (i) as immunostimulant, for preventative or therapeutic use; and (ii) treating tumors and autoimmune diseases, or diseases associated with a Th1 defect, especially pre-existing infections by feline immune deficiency virus (FIV), feline leukemia virus and corona virus

New expression vector comprising DNA encoding a subunit of a dimeric form of interleukin under transcriptional control of an ecdysone-inducible promoter, useful in preparing a composition for treating e.g., inflammatory disease.

Disclosure; Page 85-86; 87pp; English.

The present invention relates to an expression vector comprising DNA encoding a subunit of a dimeric form of interleukin under transcriptional control of an ecdysone-inducible promoter. The expression vector is useful in preparing a composition for treating a disease having a pathogenesis which includes endogenous production of cytokine IL-12, IL-23 or IL-27, e.g., infectious diseases, bacterial, protozoal or virus-induced inflammation, epithelial airway inflammation such as asthma, allergic disease, or autoimmune disease such as multiple sclerosis or

CC inflammatory bowel disease. The present sequence is the coding sequence
CC of the human interleukin-12 alpha chain used in the exemplification of
CC the invention.

XX
CC The sequences given in AAQ67879-80 are expression cassettes which contain
CC the p40 and p35 subunits of human interleukin-12 (IL-12) under the

control of the entomopox virus (EPV) promoter and the vaccinia E3L promoter, respectively. These sequences were used in the construction of an ALVAC-based recombinant virus containing the genes for the two subunits of human IL-12. The p40 subunit was amplified using primers JP202 and JP189 and placed under the control of the entomopox virus (EPV) 42 kD promoter in plasmid PBSHIL12p40II. The p35 subunit was amplified using primers JP186 and JP201 and placed under the control of the vaccinia E3L promoter using primers JP218 and JP220. The expression cassette was isolated and ligated with pBSSK+ generating plasmid PBSHIL12p35II. The p35 and p40 expression cassettes were excised and assembled in pBSSK+ to give PBSHIL12 in which the two expression cassettes are orientated head-to-head relative to each other. The combination casette containing the poxvirus promoted genes for both IL-12 subunits was excised from PBSHIL12 and cloned in to ALVAC C6 vector plasmid pC6L to give pC6HIL12. Recombination between this donor plasmid and ALVAC rescuing virus produced recombinant virus ALVAC+IL12, which contains both the human IL-12 genes in the C6 locus. The resulting virus may be used in a composition for inducing an antigenic or immunological response, ie. for immunisation against pathogens. (Updated on 25-MAR-2003 to correct PN field.)

PT Recombinant poxviruses comprising exogenous DNA encoding antigenic
PT determinants useful in immunotherapy to immunize against cancers and
PT other diseases such as influenza, Newcastle Disease and rabies.
XX
PS Example 27; Fig 34; 163pp; English.
XX
CC The present invention describes a recombinant poxvirus (I), comprising
CC exogenous DNA encoding an antigenic determinant of a pathogen which is
CC then expressed in vivo in infected host cells after administration to a
CC patient and therefore induces an immunological response. (I) may be used
CC to vaccinate patients against a wide range of diseases and disorders
CC depending on the type of antigen encoded by the exogenous DNA. (I) may be
CC used to vaccinate against diseases such as rabies, influenza and
CC Newcastle Disease. It is particularly useful for immunising against
CC cancers. The poxvirus (I) also provides a means of manipulating
CC lymphocytes and tumour cells for use in cell-based immunotherapeutic
CC modalities for cancer. (I) also have enhanced safety compared to
CC unattenuated viruses (attenuation reduces the virulence of the viruses)
CC and known recombinant poxvirus vaccines. This increased level of safety
CC reduces the possibility of a 'runaway' infection in the host and reduces
CC the chance of transmission from vaccinated to unvaccinated individuals
CC and contamination of the environment. The present sequence represents a
CC Vaccinia E3L/human IL-12 P35 expression cassette used in the
CC exemplification of the present invention

New recombinant poxvirus which is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein, useful for cancer therapy.

Example 27; SEQ ID NO 199; 181pp; English.

The invention describes a recombinant poxvirus containing exogenous DNA in a nonessential region of the poxvirus, where the poxvirus is an attenuated avipox Virus that expresses an exogenous DNA encoding carcinoembryonic antigen and an exogenous DNA encoding B7 protein. Also described are: a composition comprising a poxvirus above in admixture with a carrier; and expressing carcinoembryonic antigen and B7 protein in vivo comprising administering to a mammal the composition above. Disclosed are: making recombinant poxvirus defined above; recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines; and a modified vector for expressing a gene product in a host. The recombinant poxvirus is useful for providing a recombinant poxvirus vaccine having an increased level of safety compared to known recombinant poxvirus vaccines. The recombinant poxvirus is useful for cancer therapy. This sequence represents a human IL-12 expression cassette used in the creation of NYVAC rescue virus and canarypox virus vector ALVAC comprising the human IL-12 gene.

/clone_lib="UI-R-C0"
/note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI; The UI-R-C0 library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dT track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-C0) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-C0 library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6:

791-806, 1996)"

MENT This sequence has been recovered from the left border of the T-DNA. It indicates an insertion within the locus defined by BAC clone F11C18. Details on the protocols used for generation of the sequence are described in References 1-3. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at: http://www.mpiz-koeln.mpg.de/GABI-Kat/.

                        /db_xref="taxon:10116"
                        /clone="UI-R-C2p-ny-b-11-0-UI"
                        /dev_stage="adult"
                        /lab_host="DH10B (Life Technologies)"
                        /clone_lib="UI-R-C2p"
                        /note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI;
                        The UI-R-C2p library is a subtracted library derived from
                        the UI-R-C1 library, which is a subtracted library derived
                        from the UI-R-C0 library.  The UI-R-C0 library consisted
                        of a mixture of individually tagged normalized  libraries
                        constructed from rat placenta, adult lung, brain, liver,
                        kidney,  heart, spleen, ovary, muscle, 8, 12 and 18-day
                        embryo. The tag is a string of  3-5 nucleotides present
                        between the Not I site and the oligo-dT track which allows
                        identification of the library of origin of a clone within
                        the mixture. The subtracted library (UI-R-C2p) was
                        constructed as follows: PCR amplified cDNA inserts from
                        UI-R-C1 clones from which 3' ESTs had been derived was
                        used as a driver in a hybridization with the UI-R-C1
                        library in the form of single-stranded circles. The
                        remaining single-stranded circles (subtracted library) was
                        purified by hydroxyapatite column chromatography,
                        converted to double-stranded circles and electroporated
                        into DH10B bacteria (Life Technologies) to generate the
                        UI-R-C2p library. This procedure has been previously
                        described (Bonaldo, Lennon and Soares, Genome Research 6:
                        791-806, 1996)"

          The sequence contained an oligo-dT track that was present in the
          oligonucleotide that was used to prime the synthesis of first
          strand cDNA and therefore this may represent a bonafide poly A
          tail. The sequence tag present in the cDNA between the NotI site
          and the oligo-dT track served to identify it as a clone from the
          normalized rat placenta pool library cDNA Library Preparation: M.B.

                    /note="Vector: pT7T3D-PacI; Site_1: Not I; Site_2: Eco RI;
                    The UI-R-DK0 library is a subtracted library derived from
                    a mixture of five individually tagged normalized rat
                    libraries: brain-nRBP (20%), heart-nRHP (20%), kidney-nRKP
                    (20%), aorta-nRAP (20%), and placenta-nRPP (20%). Each
                    original library was constructed from a mixture of equal
                    amounts of RNA from seven different developmental
                    time-points: embryonic day 17, embryonic day 19, embryonic
                    day 21, adult day 1, adult day 12, adult day 75, and adult
                    day 200. (Exception: the aorta pool does not contain
                    embryonic day 17 RNA and the placenta pool contains only
                    the three embryonic stages). Each library was normalized
                    individually according to the procedure described by
                    Bonaldo, Lennon & Soares (Genome Research Genome 6:
                    791-806, 1996). For construction of the DK0 subtracted
                    library, plasmid DNA from each of the five individually
                    tagged normalized libraries was mixed in the proportions
                    specified above and electroporated into competent bacteria
                    for production of single-stranded circular DNA
                    representing the pool of libraries. Single-stranded
                    circular DNA representing these five normalized libraries
                    was then used as a tracer in a subtractive hybridization
                    with a driver (PCR amplified inserts from a plasmid DNA
                    template preparation) comprising: a) a set of about 1,000
                    arrayed clones from each of the five non-normalized
                    libraries of brain (CT0s), heart (CS0s), kidney (CU0s),
                    aorta (CW0s), and placenta (CX0s). The resulting pool of
                    approximately 5,000 clones represented about 33.3% of the
                    final driver population. A set of about 2,000 arrayed
                    clones from each of the five normalized libraries of brain
                    (CT0), heart (CS0), kidney (CU0), aorta (CW0), and
                    placenta (CX0). The resulting pool of about 10,000 clones
                    represented about 66.6% of the final driver population.
                    TAG_TISSUE=rat placenta pool
                    TAG_LIB=UI-R-DK0

                     /note="Vector: pSPORT1; Site_1: Not I; Site_2: Sal I;
                     a.1st strand cDNA was primed with a Not I primer-adapter
                     (5' - pGACTAGTTCTAGATCGCGAGCGGCCGCCC(T)15-3')
                     b.Double-stranded cDNA was ligated to Sal I adapter,
                     digested with Not I and cloned into the pSPORT 1-vector
                     pre-cut with Not I and Sal I. c.The ligation mix was
                     transformed into DH10B cells. d.The cells were grown in
                     SOC = 5g yeast, 20g tryptone, 0.5 g NaCl, 10 mM MgSO4, 10
                     mM MgCl, 0.2% glucose/Liter, (no antibiotic). e.DMSO was
                     added to a final conc. of 10% as a cryoprotectant.and
                     frozen f.The titre before freezing was determined as
                     ~2400/100 ul. Assuming a 10% loss upon freezing, the titre
                     is probably ~2100/ 100 ul. g.9 tubes each containing ~
                     2100 clones/100 ul [ = total of ~19,000] are enclosed.
                     h.The frequency of vectors containing inserts is 96% as
                     determined by digestion check after picking 24 clones,
                     miniprep and subsequent digestion with Not I and Sal I.
                     i.A low level of 32P was used in the cDNA synthesis
                     procedure. The level measured by holding a Geiger Counter
                     next to a tube was background."

                    RIKEN. Division of Experimental Animal Research in Riken
                    contributed to prepare mouse tissues. 1st strand cDNA was
                    primed with a primer [5'
                    GAGAGAGAGAAGGATCCAAGAGCTCTTTTTTTTTTTTTTTTVN 3'], cDNA was
                    prepared by using trehalose thermo-activated reverse
                    transcriptase and subsequently enriched for full-length by
                    cap-trapper. cDNA went through one round of normalization
                    to Rot = 10.0 and subtraction to Rot = 459.0. Second
                    strand cDNA was prepared with the primer adapter of
                    sequence [5' GAGAGAGAGATTCTCGAGTTAATTAAATTAATCCCCCCCCCCCCC
                    3']. cDNA was cleaved with XhoI and BamHI. Vector: a
                    modified pBluescript KS(+) after bulk excision from Lambda
                    FLC I. "

                      /clone_lib="Mouse 10kb plasmid UUGC1M library"
                      /note="Vector: PWD42nv; Purified genomic DNA from M.
                      musculus C57BL/6J (male) was obtained  from the Jackson
                      Laboratory Mouse DNA Resource
                      (http://www.jax.org/resources/documents/dnares/). The DNA
                      was hydrodynamically sheared by repeated passage through a
                      0.005 inch orifice at constant velocity. The sheared DNA
                      was blunt end-repaired with T4 DNA polymerase and T4
                      polynucleotide kinase. Adaptor oligonucleotides were
                      ligated to the blunt ends in high  molar excess. The
                      adaptored DNA was purified and size-selected for a 9.5 to
                      10.5 kb range using preparative agarose gel
                      electrophoresis. Vector DNA was prepared from a derivative
                      of pWD42 (gi|4732114|gb|AF129072.1), a copy-number
                      inducible derivative of plasmid R1. The vector was ligated
                      with adaptors complementary to the insert adaptors and
                      purified. The sheared, adaptored mouse DNA was annealed to
                      adaptored vector DNA, and transformed into
                      chemically-competent E. coli XL10-Gold (Stratagene) cells
                      and selected for ampicillin resistance."

US-09-917-265A-32
; Sequence 32, Application US/09917265A
; Patent No. 6818444
; GENERAL INFORMATION:
;  APPLICANT: Wonderling, Ramani S.
;  APPLICANT:  Boroughs, Karen L.
;  TITLE OF INVENTION: CANINE AND FELINE PROTEINS, NUCLEIC ACID MOLECULES AND USES
;  TITLE OF INVENTION:  THEREOF
;  FILE REFERENCE: IM-5
;  CURRENT APPLICATION NUMBER: US/09/917,265A
;  CURRENT FILING DATE:  2001-07-27
;  PRIOR APPLICATION NUMBER: 60/223,016
;  PRIOR FILING DATE: 2000-08-04
;  NUMBER OF SEQ ID NOS: 111
;  SOFTWARE: PatentIn version 3.2
; SEQ ID NO 32
;   LENGTH: 666
;   TYPE: DNA
;   ORGANISM: Felis catus
;   FEATURE:
;   NAME/KEY: CDS
```

Sequence 20579, Application US/09270767
Patent No. 6703491
GENERAL INFORMATION:
APPLICANT: Homburger et al.
TITLE OF INVENTION: Nucleic acids and proteins of Drosophila melanogaster
FILE REFERENCE: File Reference: 7326-094
CURRENT APPLICATION NUMBER: US/09/270,767
CURRENT FILING DATE: 1999-03-17
NUMBER OF SEQ ID NOS: 62517
SOFTWARE: PatentIn Ver. 2.0
SEQ ID NO 20579
LENGTH: 479
TYPE: DNA
ORGANISM: Drosophila melanogaster

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-10-741-601-960
Sequence 960, Application US/10741601
Publication No. US20040166519A1
GENERAL INFORMATION:
 APPLICANT: CARGILL, Michele et al.
 TITLE OF INVENTION: GENETIC POLYMORPHISMS ASSOCIATED WITH
 TITLE OF INVENTION:  STENOSIS, METHODS OF DETECTION AND USES THEREOF
 FILE REFERENCE: CL001500
 CURRENT APPLICATION NUMBER: US/10/741,601
 CURRENT FILING DATE:  2003-12-22
 NUMBER OF SEQ ID NOS: 26415
 SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 960
  LENGTH: 201
  TYPE: DNA
  ORGANISM: Homo sapiens
-10-741-601-960

ignment Scores:
